

In Eclipse configure a JRE:

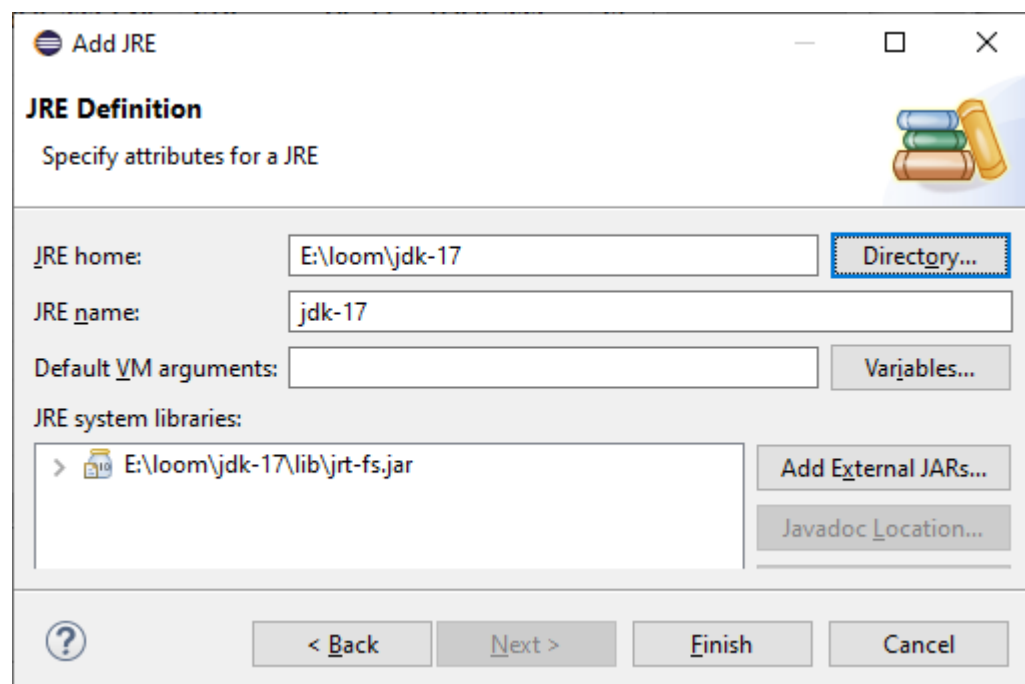

Windows -> Preferences:

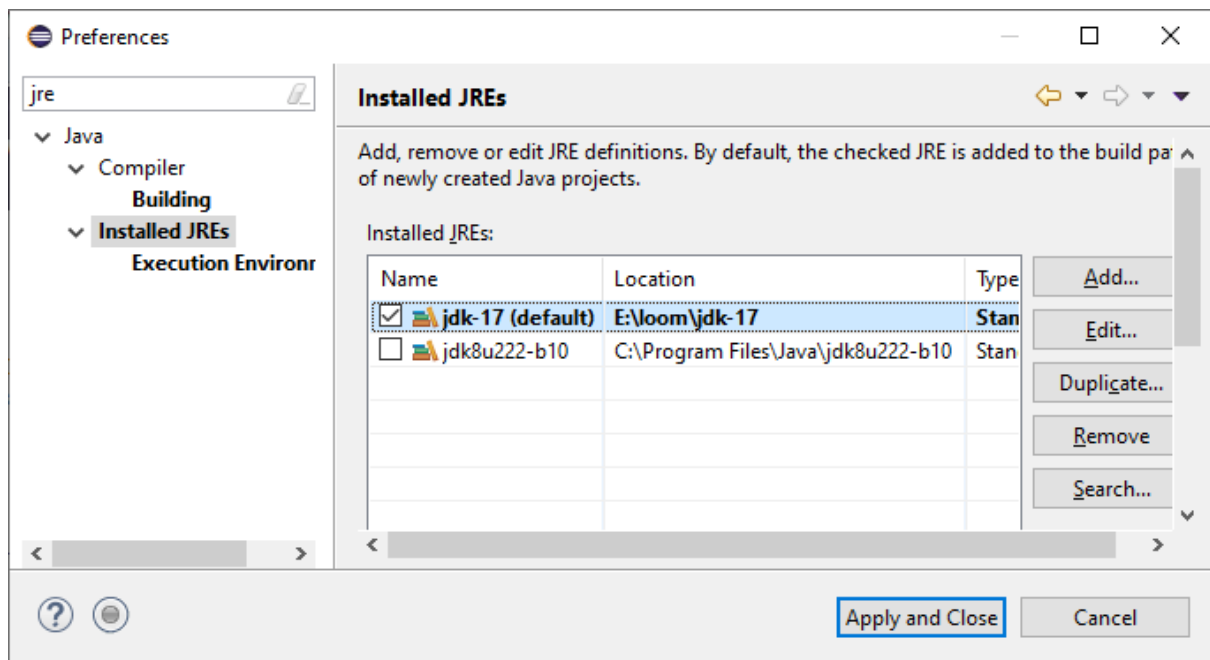

Eclipse projects from the filesystem

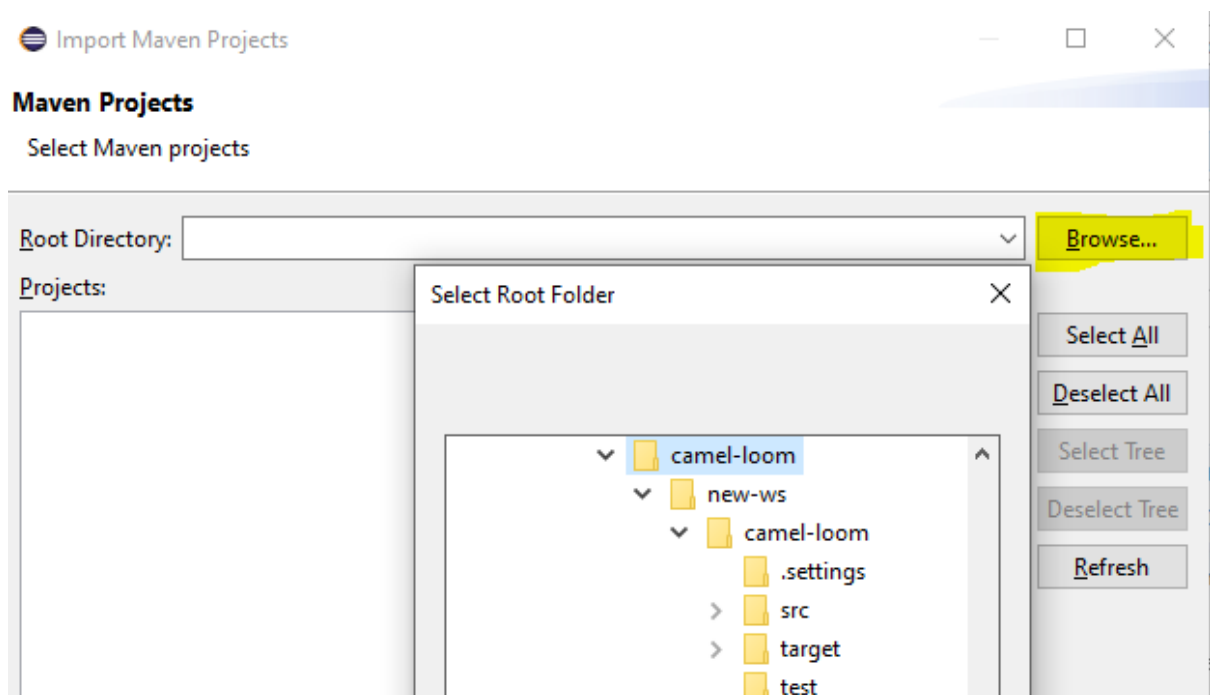

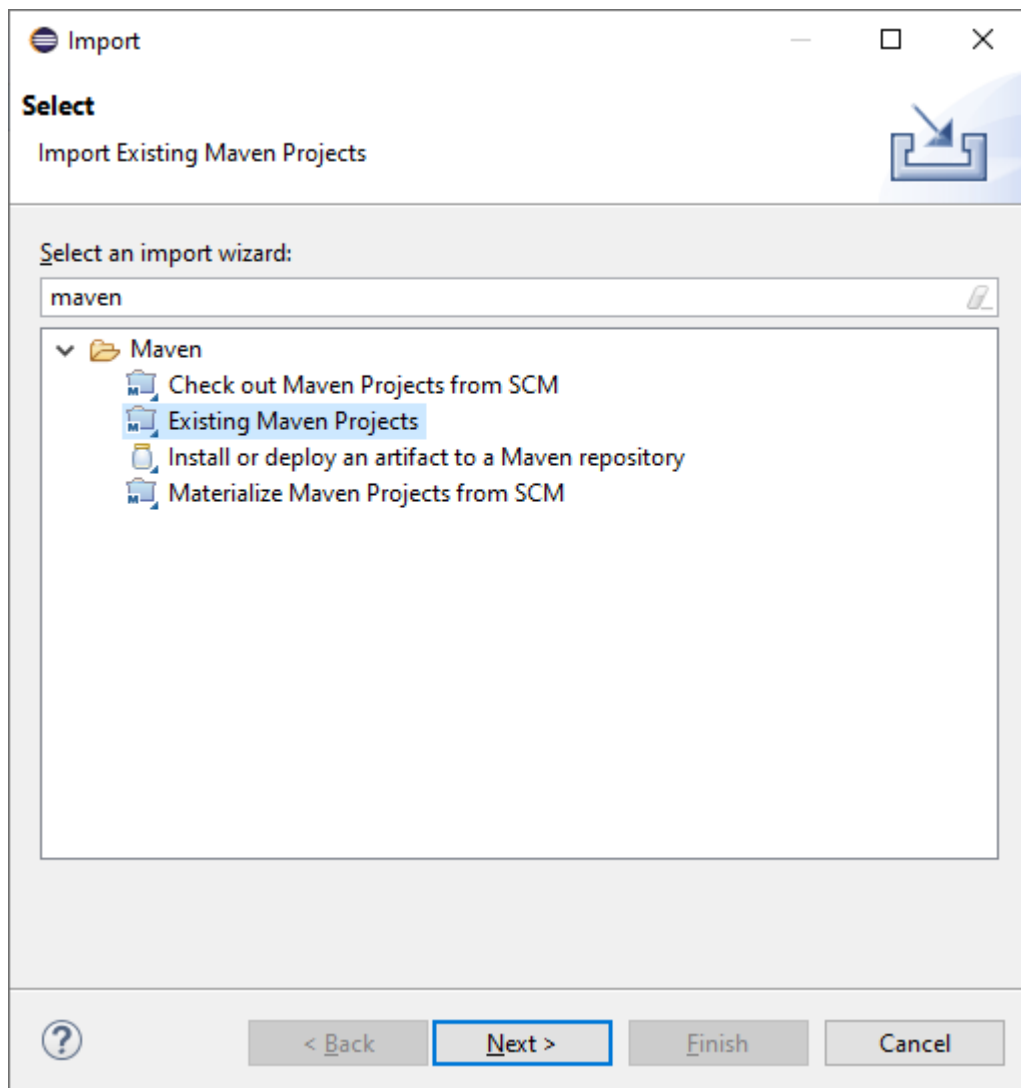

[Eclipse Marketplace](#)

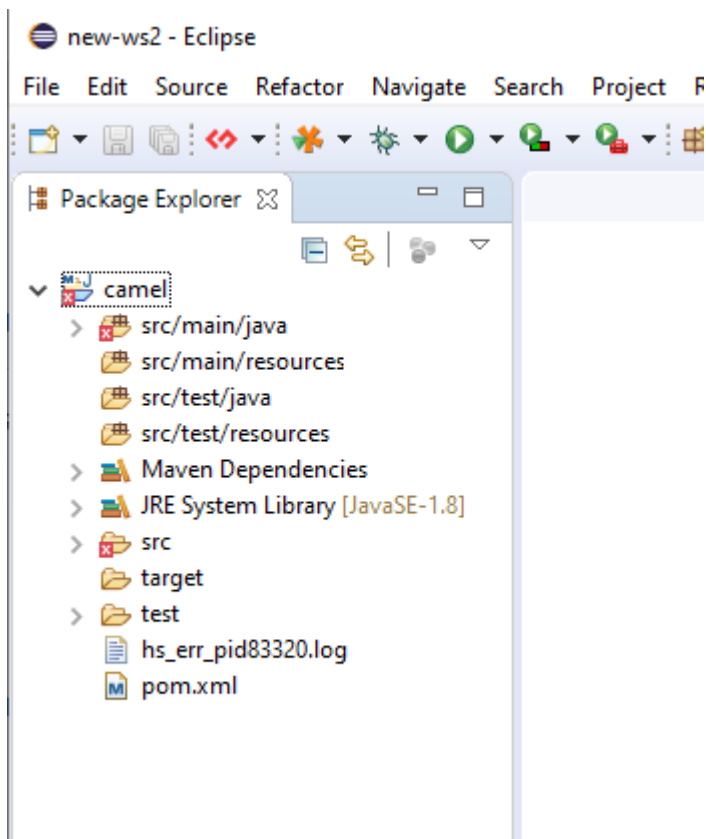

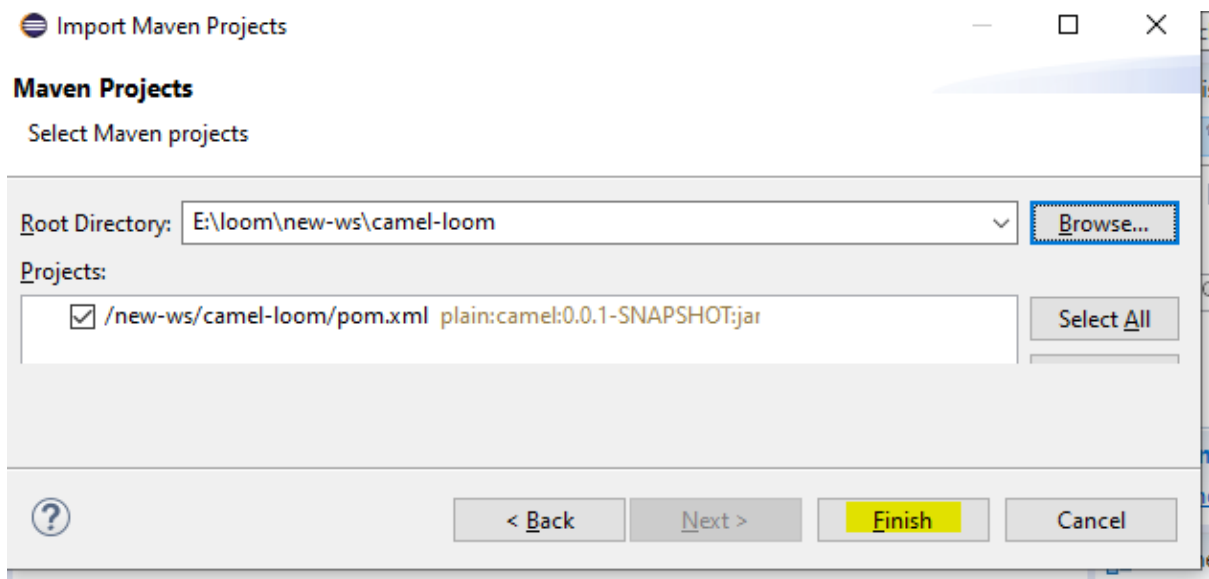

E with additional plugins and install

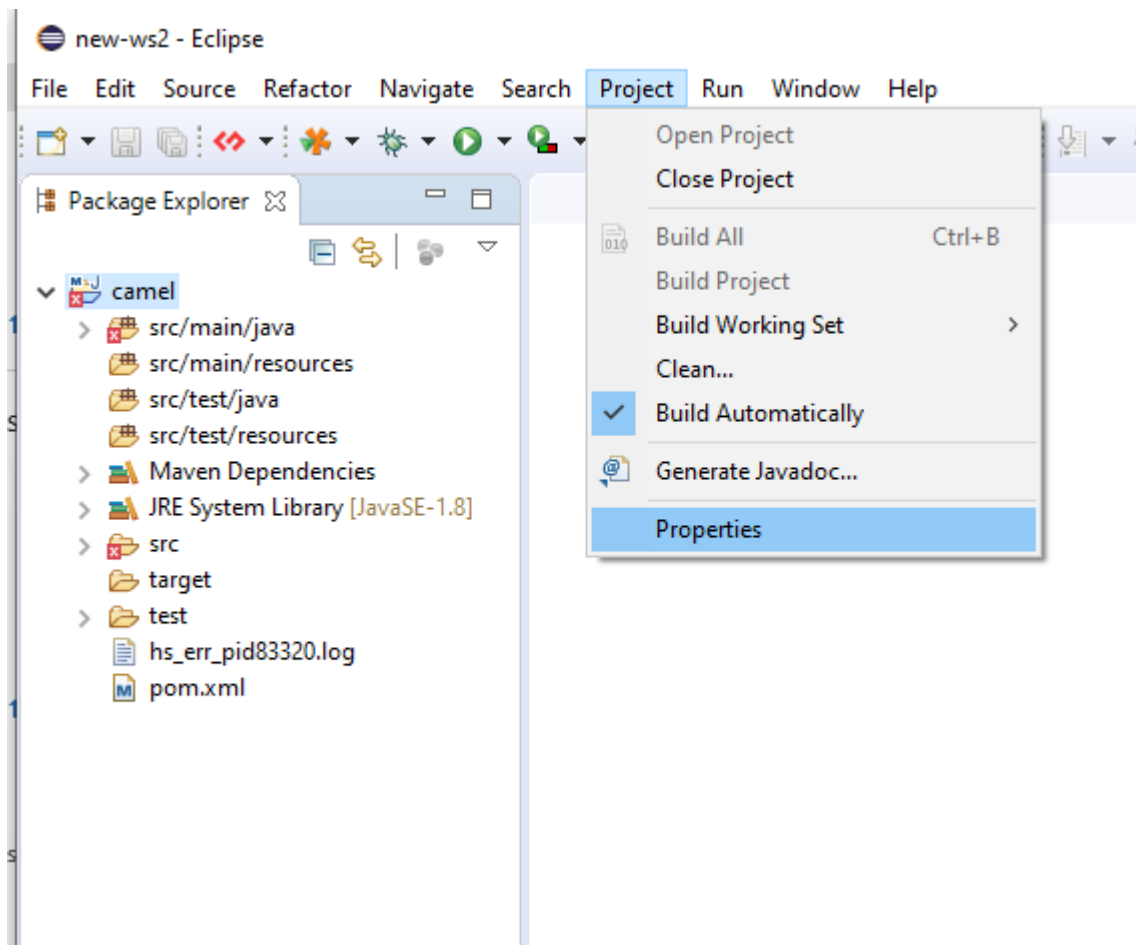

File -> Import...  
"Existing Maven Projects"

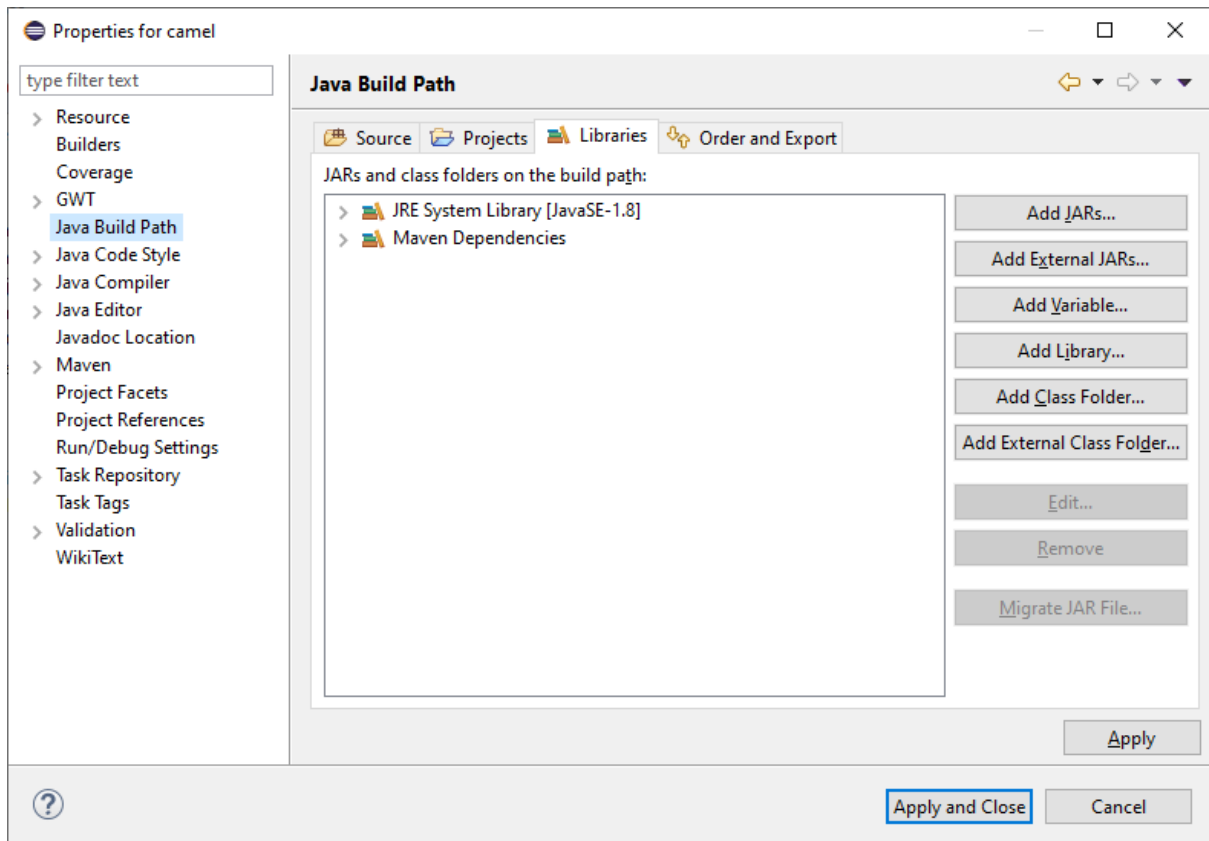

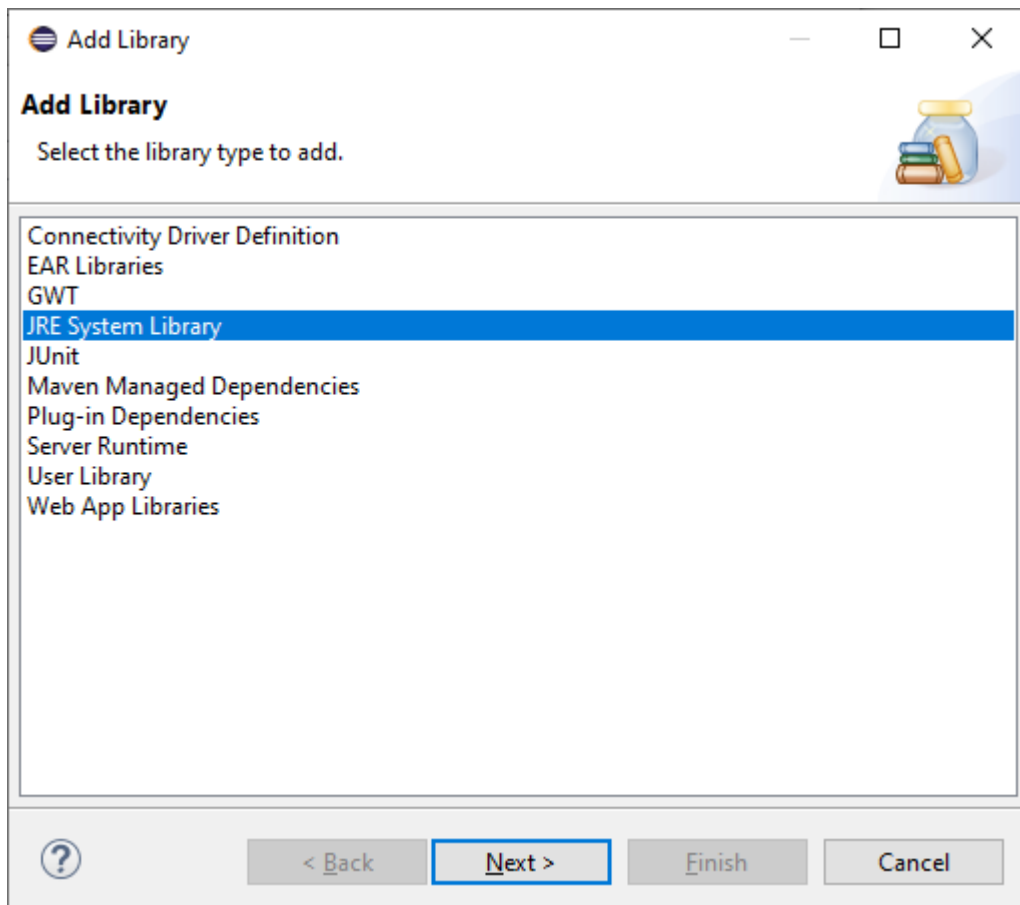

Edit the project preferences to set the correct JRE:

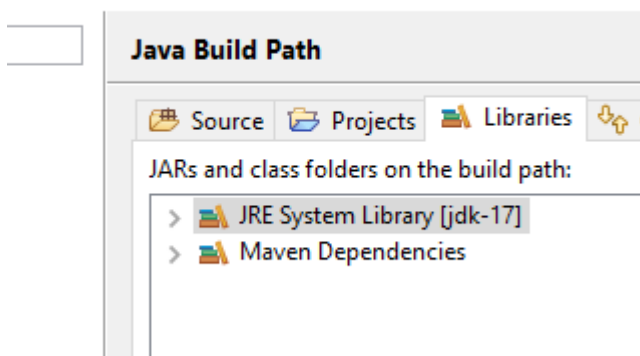

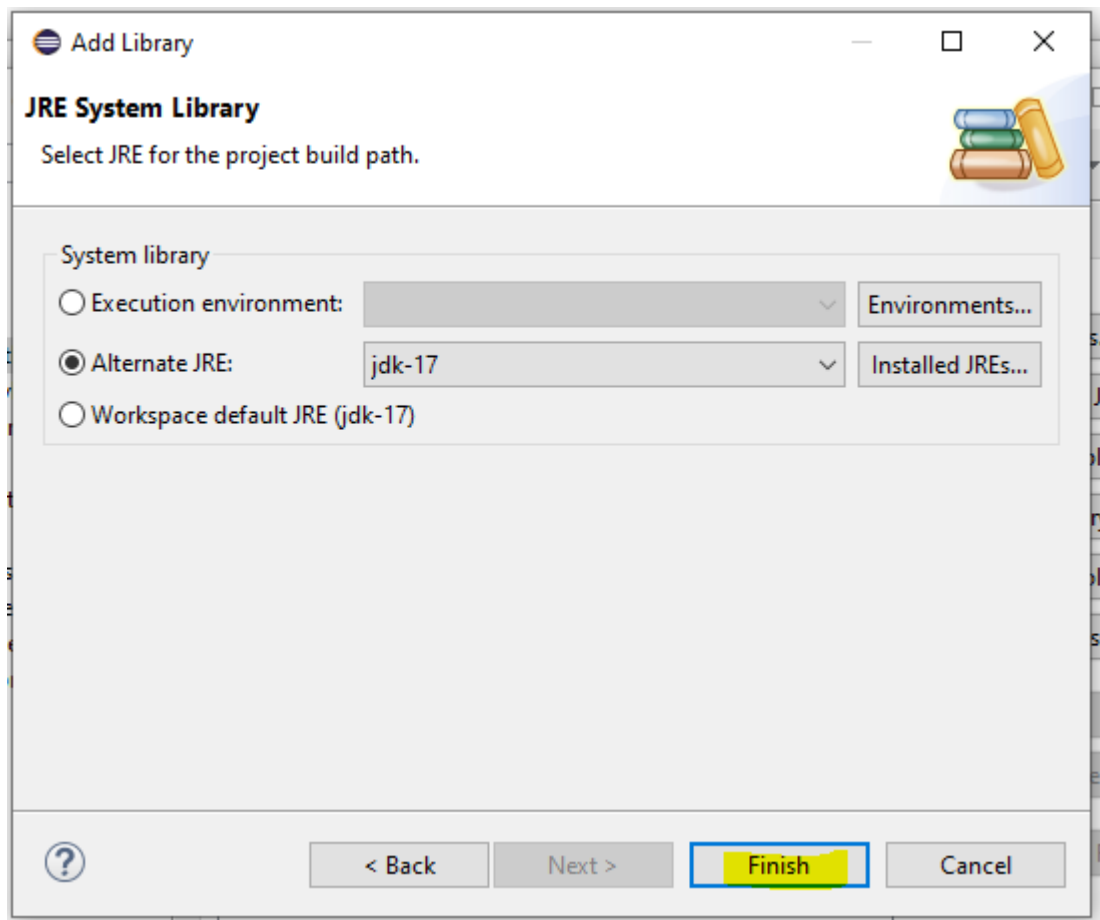

Select "Java Build Path" on left and "Libraries" tab on right:

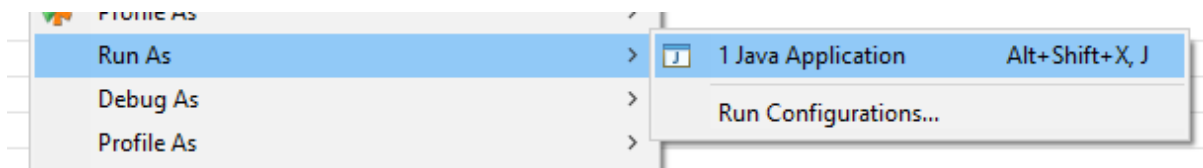

Delete the JRE System library shown. Use “Add Library...” to add the JRE with Loom:

“Apply and Close”

Should now be able to run “Server” (currently configured to use Virtual threads). Open Server.java and from context menu on editor choose:

“Client” can be run in a similar fashion.
